Copying activities stimulate child's eye - hand coordination. When children draw different circles and squares their brains compare evolving drawings with original shapes. This process strengthens visual-motor integration and fine-motor hand and fingers movements control.

Activities in this workbook stimulate children's ability to draw longer lines and ability to change direction of drawing. Tasks are set in form of pairs or strings of dots which children connect by drawing. Strings of dots differ in their length and spacing between the dots. These activities stimulate acquisition of basic graphomotor, fine-motor and pre-writing skills and competences which later play important role in development of writing and other important fine-motor skills.

What the science says about visual motor training?

Science fact:

Visual-motor exercises create functional connections among visual and motor regions in brains.

Science fact:

Interrelation between fine motor skills, non-verbal intelligence and executive functioning.

Science fact:

Visual-motor exercises improve graphomotor skills which are important predictors of later academic achievement.

About BrainscribED Workbooks Collection

A **comprehensive** collection of **5.600 +** worksheets and **30.000 +** activities aimed at helping the development of visual-motor integration and graphomotor skills in children.

Visual-motor integration development is stimulated by **fun** and **user friendly** activities tailored for children at different developmental stages and levels of skills.

Every child's visual motor integration and skills development can **benefit** from graphomotor/visual-motor tasks and training at home or in a classroom.

Teachers and other professionals working with children with visual motor integration problems or/and with writing problems will find a plentitude of useful and engaging tasks for a **systematic intervention** in BrainscribED workbooks.

BrainscribED workbooks provide **parents** with developmentally appropriate and gradually challenging tasks for their children as well as they offer **teachers** and other **experts** (preschool, school, special education, therapy, etc.) appropriate and gradually challenging tasks according to developmental needs of their children.
